Abdelrhman Fikri Elrhmany

DevOps Engineer

abdelrhmanfikri182017@gmail.com | +20 1272790237 | Cairo, Egypt | linkedin.com/in/abdelrhman-fikri | abdelrhman-fikri.netlify.app

PROFESSIONAL SUMMARY

DevOps Engineer with 4.5+ years in IT and cloud infrastructure, including 2.5+ years in DevOps, designing CI/CD pipelines, AWS cloud infrastructure, and AI-platform deployments across 20+ concurrent products, plus hands-on system administration of on-premises and hybrid environments. Trusted DevOps owner for a live product portfolio spanning marketplaces, AI coaching and compliance platforms, e-commerce, mobile apps, facilities/IoT, and enterprise simulation clients. Built a self-healing CloudWatch-to-Jenkins auto-remediation pipeline, led incident response to an AWS account compromise, hardened a production HR/payroll system to SRE standards, and deployed compliant AI infrastructure on Amazon Bedrock. Track record: 40% MTTR reduction, 3x deployment frequency, 70% less manual provisioning work, and dozens of production releases shipped every month.

KEY ACHIEVEMENTS

- Automated release pipelines delivering 50-100 production deployments per month with 99.9%+ uptime, tripling deployment frequency.
- Cut AWS spend by 20-40% through right-sizing, resource cleanup, and budget/usage alarms.
- Reduced mean time to recovery by 40% with a self-healing CloudWatch -> SNS -> Jenkins remediation pipeline.
- Led incident response to an AWS account compromise and rebuilt account guardrails (MFA, least-privilege IAM, budget alarms).
- Deployed compliant AI infrastructure on Amazon Bedrock and built a multi-agent, Claude-powered pull-request review platform.
- Six-time Employee of the Month and Continuous Learning Award recipient; trained and mentored engineers on DevOps practices.

EXPERIENCE

Mid-Level DevOps Engineer, ***Genesis Creations S.A.E.*** Jan 2026 - Present

- Promoted in January 2026; own CI/CD, cloud infrastructure, security, and release management across 20+ products.

DevOps Engineer, ***Genesis Creations S.A.E.*** Apr 2024 - Dec 2025

- Core member of a 2-3 person DevOps team supporting 20+ concurrent client and internal products, delivering 50-100 fully automated production deployments per month at 99.9%+ uptime - owning CI/CD, cloud infrastructure, security, incident response, and release management.
- Architected CI/CD pipelines (GitHub Actions + Jenkins) across 15+ product repositories, tripling deployment frequency and removing manual release steps.
- Designed a self-healing production pipeline (CloudWatch alarm -> SNS -> automated listener -> Jenkins redeploy) that resolves recurring high-load incidents with zero manual intervention.
- Led incident response to an AWS account compromise - revoked rogue IAM users, closed exposed ports, remediated SES/domain abuse, and rebuilt account guardrails (MFA, least-privilege IAM, budget alarms) to prevent recurrence.
- Automated infrastructure provisioning with Terraform and Ansible, cutting manual environment setup by 70%.
- Led live production database migrations (VPC/RDS rebuild, snapshot restore, zero-downtime data resync) for e-commerce and platform systems.
- Deployed compliant AI infrastructure on Amazon Bedrock (Claude models) for a regulated-industry document-processing platform, including Zero Data Retention enforcement, least-privilege IAM, and CloudWatch cost/usage alarms.
- Built internal AI/automation tools from scratch, including a multi-agent, Claude-powered automated pull-request review platform (static analysis, embeddings, blast-radius impact analysis, self-hosted dashboard).
- Cut AWS spend by 20-40% through right-sizing, resource cleanup, and budget/usage alarms; run automated snapshots, offsite S3 backups, and documented RTO/RPO targets for production systems.
- Monitor production with CloudWatch, Grafana/Prometheus, and custom-built health tooling across Docker, ECS, and Kubernetes workloads.
- Primary responder for production incidents; author of runbooks, architecture diagrams, post-mortems, and client security assessment documentation.
- Mentor and train engineers on CI/CD, cloud, and DevOps best practices; use LLM-powered tooling, AI coding assistants, and prompt engineering in daily delivery.
- Integrated container security scanning into CI workflows and standardized Docker environments to reduce configuration drift.
- Six-time Employee of the Month and recipient of the Continuous Learning Award.

Part-Time DevOps Engineer, ***AEMZ Technology*** Dec 2025 - Present

- Own deployment and release engineering for 4-8 products spanning consumer mobile apps, marketing/corporate websites, web apps and dashboards, and backend APIs, taking each from repository to live production on AWS.
- Built GitHub Actions and Codemagic/Bitrise CI/CD pipelines that automate testing, building, signing, and delivery of iOS and Android apps (cross-platform and native) and web applications.

- Run end-to-end mobile releases: App Store and Google Play publishing, code signing and certificate management, and automated versioning and release workflows.
- Designed and maintain Dev, Staging, and Production environments with PR-gated merges, so every change is reviewed and validated before it reaches users.
- Host and operate websites and backends on AWS using EC2 with Nginx, S3 with CloudFront, and Docker/ECS containers, with Route 53 DNS, domains, and SSL/TLS.
- Secure delivery end to end: secrets management, least-privilege IAM, vulnerability scanning in CI, HTTPS enforcement, and WAF protections.
- Monitor production with CloudWatch alarms, uptime checks, and crash reporting; run automated backups and keep AWS costs under control.
- Onboard developers (environments, access, and tooling) and launched new products from scratch, supporting the team through releases and production issues.

Part-Time System Administrator, ***Light System Technology (LST)*** Feb 2026 - Jul 2026

- Administered 30+ servers across on-premises and cloud: Windows Server and Active Directory, Linux, and virtualized infrastructure.
- Led a migration of servers and services, planning cutover and validation to keep business operations running.
- Managed networking and firewalls, patching, backup and recovery, and user/access control for on-prem environments.
- Administered Azure and Microsoft 365 resources, applying least-privilege access and monitoring; documented procedures to keep operations repeatable.

Software Engineering Training Program (Part-Time), ***ALX Africa / Holberton School*** Jul 2023 - Feb 2025

- Completed a full-stack DevOps engineering program covering backend systems, containers, and infrastructure.
- Built Dockerized microservices deployed on AWS ECS with Infrastructure-as-Code for repeatable environments.
- Led post-mortem simulations and practiced incident command techniques in live scenarios.

IT Specialist, ***Genesis Creations S.A.E.*** Sep 2023 - Mar 2024

- Automated system patching and monitoring across 30+ endpoints, cutting high-severity incident recurrence by 50%.
- Trained staff on cybersecurity hygiene, increasing phishing detection accuracy by 60%.

IT Manager, ***El-sorady Company*** Feb 2021 - Nov 2022

- Designed and maintained internal network infrastructure; managed Windows servers and mail systems at 99.9% uptime.
- Implemented secure access control and CCTV monitoring systems.

PROJECTS

Selected products and platforms I have owned or delivered DevOps and infrastructure work for. Client and product names are intentionally omitted to respect confidentiality agreements.

Flagship Platforms & AI Engineering

3D-Asset Marketplace - *Security Hardening & Platform Program*

Led a 14-epic security hardening initiative (authentication/session security, API protection, business-logic abuse prevention, dependency management, credential-incident response) across a live 3D-asset marketplace, while shipping weekly releases with automated rollback and CI regression testing. Stack: AWS Lightsail, MongoDB Atlas, S3, GitHub Actions.

AR / Digital-Twin Delivery Platform - *Major Exhibition Launch*

Own the DevOps lifecycle for the company's core AR/digital-twin delivery platform. Migrated production from Lightsail to EC2, cloned the full stack (Lambda, S3, CloudFront, Route 53) into a parallel dev environment, and shipped a flagship release for a major technology exhibition under a fixed event deadline. Built and maintain the automated multi-target build pipeline (WebGL, Windows, macOS) that publishes every production push to the platform's customer dashboard.

AI Coaching Platform - *Model Server & Ingest API*

Built the ingest API and session layer for an AI coaching platform, shipped Claude-powered coaching narratives and full Arabic (RTL) localization, then closed out with a 75-item hardening pass and production cutover.

Regulated-Industry AI Compliance Platform

Amazon Bedrock (Claude) environment for a document-processing client in a regulated industry, built to meet the client's data-retention and access-control requirements.

AI Code-Review Platform - *Internal Tool*

Built from scratch; migrated the review engine mid-project from OpenAI to Anthropic Claude models for stronger reasoning quality.

Training Performance Analytics Platform

Built an AI-powered performance-analytics platform for a Unity/Unreal-based training simulator: parses operator eye-tracking (fixation) and biometric session logs, computes composite performance/response scores with severity labels, and generates LLM-authored narrative reports correlating biometric spikes with in-scenario events. Shipped as an offline, air-gapped deployment - a local FastAPI LLM server with OpenAI-compatible endpoints, a full offline dependency/model bundle with integrity verification, a CLI for single or batch report generation, and full unit-test coverage, with biometric data kept local and out of version control for privacy.

Digital-Twin Data Integration - *Isolated Client Network*

Delivered a secure data-integration pipeline connecting a Unity digital-twin build to a facilities/data-center management API over an isolated client network - engineered the access path (Okta MFA, PAM, remote desktop) and a Cloudflare outbound tunnel to reach the API without opening inbound firewall rules. Built a resilient scraper covering every read-only endpoint with pagination-aware sizing and stall/loop detection, then authored a full Unity integration guide and a ready-to-use C# starter client (auth, pagination, sample MonoBehaviour) so the client's Unity team could build against real data independently.

Client & Product Delivery

Practice Management Platform - *Web, iOS, Android*
End-to-end DevOps owner for a practice-management platform across web, iOS, and Android. Containerized the stack with Docker Compose and Nginx behind a GitHub Actions CI/CD pipeline; migrated DNS to Route 53 and resolved post-migration propagation issues; configured Firebase (auth, analytics, crash reporting), Twilio, and Mailgun/SMTP integrations; ran a focused security-remediation sprint (OWASP ZAP scanning, RBAC enforcement, stack-trace/log hardening); managed the MongoDB database and backup strategy; and shipped iOS builds to the App Store and Android builds with push-notification validation.

Smart-Building IoT Platform - *Facilities Clients*
DevOps owner for a smart-building IoT integration product connecting facility sensor networks (HVAC, IAQ, CCTV) to a Unity front end for multiple facilities-management clients. Built the automated multi-platform build pipeline (WebGL/Windows/macOS) with Jenkins, created an AWS Lambda + API Gateway endpoint to monitor build-license status programmatically, investigated and resolved endpoint authorization/licensing issues with third-party building-management systems, and completed a formal security assessment package for a client compliance review.

VR Collaboration Product
Delivered DevOps and deployment support for a VR-based collaboration product, including environment setup and release management.

E-Commerce Database Migration
Moved a client e-commerce platform's production database onto a rebuilt VPC/RDS with zero downtime.

Self-Healing Logistics Pipeline - *Logistics/Shipping Integration*
Applied the self-healing pipeline to a logistics/shipping client integration, removing manual restarts for recurring high-load incidents.

Corporate Website
Built and maintain the company's public-facing website infrastructure and deployment pipeline.

Food & E-Commerce Client Platform
Delivered infrastructure, deployment, and environment support for a food/e-commerce client platform.

Tactical Training Simulation Platform - *Enterprise Client*
DevOps support for a Unity-based tactical training simulation product, including build pipeline and environment management for an enterprise client.

Naval Training Simulation Platform - *Enterprise Client*
DevOps support for a Unity-based naval training simulation product, including build and deployment pipeline management.

Games & Interactive Products

Indie Game - *Steam Launch*
Supported the build, packaging, and release pipeline for an indie game's launch on Steam.

Multiplayer Game - *Backend Infrastructure*
Built and maintained backend/network infrastructure for a multiplayer game title, supporting session management and deployment.

Internal Tooling & Automation

Service Health Monitor - *Internal Tool*
Built a modular internal tool that monitors service health across the company's 20+ concurrent products from a single dashboard.

Content Cleanup Automation - *Internal Tool*
Built an internal automation tool to streamline recurring content/data cleanup workflows.

Internal Recruiting / Applicant Tracking System
Built the company's careers platform from scratch - Express/MongoDB API, JWT auth with RBAC, recruiter Kanban pipeline, candidate assessments - plus its CI/CD and deployment pipeline.

HR/Payroll System Production Hardening - *SRE Reliability Program*
Led a production-hardening (SRE) initiative on the company's internal HR/payroll information system - closing reliability gaps, strengthening monitoring/alerting, and reducing incident recurrence to bring the platform to a stable, audit-ready production standard.

Billing Operations Automation
Built an internal billing-operations automation suite to reduce manual invoicing and reconciliation work.

Managerial & Process Automation
Designed internal workflow automations to reduce manual coordination and reporting overhead for engineering management.

Shared Jenkins CI/CD Infrastructure

Own and maintain the company's shared Jenkins infrastructure across multiple hosts - including an Oracle Cloud migration, SSL/certificate management, PR-gated build workflows, and secrets management integrations feeding 15+ product pipelines.

Workflow & Marketing Automation Platform
Deployed and maintain an n8n-based internal automation platform powering marketing and operational workflow automation across the company.

OCR + LLM Document Pipeline
Built a document-processing pipeline combining OCR extraction with LLM-based structuring/analysis for a data-processing use case.

Hiring-Automation Platform - *.NET*
Delivered infrastructure and deployment support for an internally built .NET hiring/recruitment automation platform.

AWS Account Governance & Security Incident Response
Company-wide AWS account ownership; reconstructed the compromise timeline from cost anomalies and cleared the domain's malware warning.

Client Relationship & Delivery Engagements

- **Major Exhibition Delivery:** Coordinated infrastructure and release delivery for the company's presence at a major technology exhibition, shipping a platform launch under a fixed event deadline.
- **Client Offboarding & Handover:** Managed a client engagement through to handover/offboarding, including infrastructure documentation and knowledge transfer.

SKILLS

- **Cloud & DevOps:** AWS (EC2, ECS, RDS, S3, CloudFront, Route 53, Lambda, Bedrock, IAM, SES), Azure, Oracle Cloud, Terraform, Docker, Kubernetes, Helm, ArgoCD, GitHub Actions, GitLab CI, Azure DevOps, Jenkins, Ansible, Nginx, Apache, Cloudflare, n8n
- **CI/CD:** Infrastructure as Code, GitOps, Agile/Scrum, automated testing, mobile release pipelines (Codemagic, Bitrise), canary deployments, self-healing pipelines, multi-platform build automation, release management
- **Reliability & Operations:** Cost optimization (FinOps), disaster recovery (RTO/RPO), high availability, root cause analysis, post-mortems, runbooks and technical documentation
- **Security:** DevSecOps, incident response, incident command, API security, phishing awareness, Cisco information security, Trivy, SonarQube, OWASP ZAP, VPNs, Linux hardening, IAM/Zero Data Retention, RBAC, PAM/Okta MFA, access control
- **AI/LLM Platforms:** Amazon Bedrock, Claude and OpenAI model integration, prompt engineering, AI coding assistants, RAG/embeddings, agentic pipelines, local/offline LLM serving (FastAPI)
- **Monitoring & Logging:** Observability, SRE, cloud operations, log management, CloudWatch, Prometheus, Grafana, Datadog, New Relic, Zabbix, ELK Stack, SLAs and uptime management, alerting and on-call incident response
- **System Administration:** IT infrastructure management, Windows Server, Active Directory, Linux, virtualization, networking and firewalls, Cisco network devices, network switches, Linux server administration, IT hardware support, endpoint security, Microsoft 365, backup and recovery, patch management
- **App Services:** Firebase, Twilio, Mailgun
- **Databases:** MongoDB (Atlas), MySQL/RDS, PostgreSQL
- **Languages:** Python, Bash, JavaScript, C#
- **OS & Tools:** Linux (Ubuntu, CentOS), Git, VS Code

CERTIFICATIONS

AWS Certified Solutions Architect - Associate (SAA-C03) | AWS Certified Security - Specialty (SCS-C02) | Cisco Certified DevNet Associate (DEVASC) | Cisco Certified CyberOps Associate (CBROPS) | Cisco Certified Network Associate (CCNA) - 3-Part Series, NTI | CompTIA Network+ (N10-007) | Google IT Support Professional Certificate | Fortinet NSE 1 Network Security Associate | ALX Software Engineering Graduate | Front End Developer (Udacity) | ClickUp Power User | HashiCorp Certified: Terraform Associate (in progress) | ISC2 Candidate (valid through Oct 2027)

- **Cisco Courses:** Network Security; CCNA modules (Introduction to Networks; Switching, Routing, and Wireless Essentials; Enterprise Networking, Security, and Automation)
- **AWS Skill Builder Knowledge Badges (2025):** Cloud Essentials, Compute, Networking Core, Architecting, Amazon EKS, Migration Foundations, Data Migration, Data Protection & Disaster Recovery, Serverless, Events and Workflows, File Storage
- **AWS Educate (2024):** Cloud 101; Getting Started with Storage, Compute, Databases, Networking, Security, Serverless, Cloud Ops
- **APIsec University:** API Security Fundamentals, OWASP API Security Top 10, API Authentication, API Gateway Security, Securing API Servers, API Penetration Testing, API Documentation

EDUCATION

B.Sc. in Communication Engineering, MTI University (Networking, Optical and Mobile Communication) | Languages: Arabic (Native), English (Fluent)
